SUMMARY

Backend engineer with a foundation in financial systems operations — SQL database administration, FIX protocol integration, and QA at scale for a major electronic trading platform — now building and deploying full-stack applications independently, from schema design through CI/CD. Comfortable working across the stack, with particular depth in backend architecture and cloud infrastructure (AWS).

SKILLS

Back-end: Node.js, Next.js (App Router), PostgreSQL, Prisma, REST/GraphQL APIs

Cloud/Infra: AWS (ECS/Fargate, Lambda, S3, CloudFront, IAM, SES), Docker, GitHub Actions (CI/CD, OIDC)

Front-end: React, TypeScript, Tailwind CSS

Other: Git, BASH/ZSH, FIX Protocol

EXPERIENCE

Instructional Designer

Cyanna Education Services; New York, NY | May 2024 – March 2025

- Coordinated curriculum development with subject matter experts and educational partners, reviewing technical content for full-stack web development courses and ensuring consistency across Markdown-based course materials.
- Managed client relationships with educational institutions, gathering requirements and feedback to iterate on course design and technical content delivery.
- Provided QA testing and feedback for internal CLI tooling used to convert Markdown lessons to HTML/CSS for course delivery.

FIX Integration Specialist

Morgan Stanley; New York, NY | Oct. 2020 – Jan. 2022, Nov. 2022 – Apr. 2024

- Administered SQL databases managing 1,000+ client connectivity profiles and FIX protocol specifications for thousands of low-latency trading connections to Morgan Stanley's electronic trading platform.
- Led end-to-end QA testing for FIX protocol integrations, analyzing transaction logs in UAT environments to validate message specifications before production deployment. Handled 20+ technical integration tickets weekly, ranging from quick configuration updates to multi-week client onboarding projects.
- Collaborated with external vendors and buy-side trading clients to debug connectivity issues, configure network infrastructure (IP whitelisting, firewall rules), and ensure regulatory compliance with industry standards.
- Participated in daily standups and sprint planning using Agile methodology, managing Salesforce tickets and coordinating across cross-functional teams to deliver technical solutions.

Full-Stack Curriculum Engineer

2U, Inc.; New York, NY (remote) | Jan. 2022 – Nov. 2022

- Engineered internationalization (i18n) feature for production GatsbyJS blog serving university students, implementing dynamic URL routing (/es/* paths) and language toggle UI. Integrated translated Markdown content through automated build pipeline.
- Developed full-stack curriculum codebases and interactive coding exercises for MERN stack certificate programs, including runnable starter projects, solution code, and SQL query exercises deployed to edX platform.
- Collaborated with product managers, QA, and instructional design teams using GitHub-based workflow to implement instructor feedback and adapt technical content for enterprise client customization projects.
- Identified and evaluated emerging technologies for curriculum integration, presenting technical recommendations to cross-functional stakeholders.

PROJECTS

Pokémoves

pokemoves.costo.so; Pokémon moveset reference tool

- Built on Next.js 16 with Prisma 7 and PostgreSQL; integrated Better Auth for authentication and Resend for transactional email.
- Deployed to AWS ECS/Fargate behind an Application Load Balancer, with Docker-based builds pushed through ECR.
- Built a GitHub Actions CI/CD pipeline authenticated via OIDC — no long-lived AWS credentials stored in CI.

Portfolio Site

costo.so; personal site and backend infrastructure showcase

- Static React/Vite frontend on S3 and CloudFront, with custom-domain HTTPS via ACM.
- Built two AWS Lambda functions (Node.js) for live infrastructure status and a spam-resistant contact form, integrated with the Resend and Amazon SES APIs.
- Configured DNS, email authentication (SPF/DKIM/DMARC), and CI/CD, independent of any framework's built-in hosting.

EDUCATION AND CERTIFICATION

MongoDB Associate Developer – MongoDB; April 2023

Certificate of Completion, Java Spring Boot/React – mthree; New York, NY; October 2020

Full-Stack Web Development Certificate – Columbia University; New York, NY; April 2020

Bachelor of Arts in Film & Media Studies – Columbia University; New York, NY; May 2017
