SUMMARY

Full-stack developer working in TypeScript, React and Node.js, with production experience at Morgan Stanley keeping high-volume trading connections healthy: tracing failures through transaction logs, validating changes before release and administering the databases behind thousands of client connections. Builds and ships applications end to end, from UI and PostgreSQL schema design through containerized deployment on AWS, CI/CD and automated tests. Building depth in Python and Go.

SKILLS

Front-end: TypeScript, JavaScript, React, Next.js, HTML/CSS, Tailwind CSS, responsive design, internationalization (i18n)

Back-end: Node.js, REST/GraphQL APIs, authentication (Better Auth), Java (Spring Boot)

Databases: PostgreSQL, SQL, MongoDB, Prisma

Cloud/DevOps: AWS (ECS/Fargate, ECR, Lambda, S3, CloudFront, IAM, SES), Docker, GitHub Actions (CI/CD)

Testing & operations: Jest/Vitest, production troubleshooting and log analysis, code review

AI tools: Claude, GitHub Copilot

Learning: Python, Go

Other: Git, Bash/Zsh, Agile/Scrum, FIX Protocol

EXPERIENCE

Instructional Designer

Cyanna Education Services; New York, NY | May 2024 – March 2025

- Coordinated curriculum development with subject matter experts and educational partners, reviewing technical content for full-stack web development courses and ensuring consistency across Markdown-based course materials.
- Provided QA testing and feedback for internal CLI tooling used to convert Markdown lessons to HTML/CSS for course delivery.

FIX Integration Specialist

Morgan Stanley; New York, NY | Oct. 2020 – Jan. 2022, Nov. 2022 – Apr. 2024

- Troubleshot production connectivity failures with external vendors and buy-side trading clients, tracing issues through transaction logs to configuration, network (IP whitelisting, firewall rules) or message-spec causes.
- Led end-to-end QA testing for FIX protocol integrations, analyzing transaction logs in UAT environments to validate message specifications before production deployment.
- Administered SQL databases managing 1,000+ client connectivity profiles and FIX protocol specifications for thousands of low-latency trading connections to Morgan Stanley's electronic trading platform.
- Handled 20+ technical integration tickets weekly, from quick configuration updates to multi-week client onboarding projects, working independently while ensuring compliance with industry standards.
- Participated in daily standups and sprint planning using Agile methodology, coordinating across cross-functional teams to deliver technical solutions.

Full-Stack Curriculum Engineer
2U, Inc.; New York, NY (remote) | Jan. 2022 – Nov. 2022

- Engineered an internationalization (i18n) feature for a production GatsbyJS blog serving university students, implementing dynamic URL routing (/es/* paths) and a language toggle UI. Integrated translated Markdown content through an automated build pipeline.
- Developed full-stack curriculum codebases and interactive coding exercises for MERN stack certificate programs, including runnable starter projects, solution code and SQL query exercises deployed to the edX platform.
- Collaborated with product managers, QA and instructional design teams using a GitHub-based workflow to implement instructor feedback and adapt technical content for enterprise client customization projects.

PROJECTS

Pokémoves
pokemoves.costo.so; TypeScript web app for comparing Pokémon learnsets

- Designed and built the UI, including side-by-side learnset comparison cards, a deck-management toolbar, empty states and a dark mode theme.
- Built on Next.js 16 with Prisma 7 and PostgreSQL, including schema design and database migrations; integrated Better Auth for authentication and Resend for transactional email.
- Deployed to AWS ECS/Fargate behind an Application Load Balancer, with Docker-based builds pushed through ECR via a GitHub Actions CI/CD pipeline.
- Wrote automated tests with Vitest; caught and fixed bugs in code review, including a server-action export violation, a validation ordering bug and a CI pipeline missing its Prisma generate step.

Portfolio Site
costo.so; personal site and backend infrastructure showcase

- Static React/Vite frontend on S3 and CloudFront, with custom-domain HTTPS via ACM.
- Built two AWS Lambda functions (Node.js) for live infrastructure status reporting and a spam-resistant contact form, integrated with the Resend and Amazon SES APIs.
- Configured DNS, email authentication (SPF/DKIM/DMARC) and CI/CD independent of any framework's built-in hosting.

EDUCATION AND CERTIFICATION

MongoDB Associate Developer – MongoDB; April 2023

Certificate of Completion, Java Spring Boot/React – mthree; New York, NY; October 2020

Full-Stack Web Development Certificate – Columbia University; New York, NY; April 2020

Bachelor of Arts in Film & Media Studies – Columbia University; New York, NY; May 2017
